RE: Pest Control Building Treatment

Dear Parent/Guardian:

In order to ensure the safety of all our students, we wish to inform you that Massac Unit #1 school buildings are regularly treated with spray chemicals to ward off common pests. When at all possible, the buildings are treated on Friday evenings so that any potential olfactory irritant is entirely absent once students return to the buildings.

If your child has an asthmatic condition such that you would like to be informed when the spray applications will occur, we will be pleased to provide you with notice prior to the treatment. You need only to inform your child's principal of your request to be notified of upcoming pest control treatments.

We hope that you and your child are having a positive and productive spring semester.

Sincerely,

Angela Farmer
Assistant Superintendent
